

Solution Brief

Securing Identities Workshop

“Identity and threat protection are high on customers’ minds. Getting identity right is a critical part of a Microsoft 365 project and is the first place we start.”

Forrester 2020 Microsoft 365 Enterprise Total Economic Impact Study

A commissioned study conducted by Forrester Consulting™ on behalf of Microsoft, June 2020

Overview

For most organisations, external cybersecurity risks have been top of mind for many. Are you aware of suspicious user and sign-in behaviour in your environment? Do ongoing suspicious requests threaten you?

Protect user identities

Identity is today’s control plane for digital transformation. Organisational barriers are blurring between who is in and out of your network. Cloud apps and the increasing use of personal devices and remote work mean that data is no longer centralised behind traditional network security.

With identity attacks on the rise, this workshop will show you how to stop tomorrow’s data breaches by securing identities today. We will help you find identity risks happening now in your environment, gain insights into your application landscape, and improve your identity security posture.

Our solution

Why you should attend

Given the complexity of identities, data, applications, and devices, it's essential to ensure the right people are securely accessing the correct information. This workshop will show you how identity is the fundamental pillar of an integrated security philosophy and end-to-end security strategy.

By attending, you can:

Optimise identity	Assess security posture	Reduce costs	Increase visibility
Identify potential risks related to identity and see opportunities for improvement	Receive a numerical rating of your identity security posture and see how it compares to similar organisations	Minimise expenses associated with password reset and helpdesk resources	Get a sample survey of apps your employees are using and if IT supports them or not

What to expect

The foundation of cybersecurity is to quickly and accurately identify authorised users and give them proper access to the information and tools they need to do their job. Our goal is to provide you with tools to protect your authorised users' identities so you can authenticate credentials and manage file access while still giving users the freedom to collaborate with others.

We'll work with you to:

- Understand your identity goals and objectives
- Define your existing and desired identity security posture
- Provide insights into applications used within your environment (sanctioned and unsanctioned by IT)
- Showcase core IT and user security scenarios through demos
- Develop a joint action plan based on key results, recommendations and next steps

We'll customise the workshop based on your organisation's needs:

				
Engagement Set-up Secure Score Application Discovery	Design & Planning	Customer Value Conversation	Key results, recommendations and next steps	Demos

Business outcomes

Get a rating of your identity security posture and see how it compares to your peers

Understand how to prevent identities from being compromised

Gain insights into apps used in your environment - even ones unsanctioned by IT

Learn how to reduce costs and improve business agility and security with simplified app access

Why Insight?

Today, technology isn't just supporting the business; it's becoming the business. At Insight, we help you navigate complex challenges to develop new solutions and processes. We will help you manage today's priorities and prepare for tomorrow's needs.

								
Global scale & coverage	Operational excellence & systems	Software DNA	Services Solutions	Data centre transformation	Next-generation tech skills	App dev & IoT expertise	Insight Digital Workspace™	Partner alignment
