EOL Value Accelerator

Insight

Modernise your End-of-life workloads

Strategically landing a footprint with Microsoft Azure and understanding your best approach to migrating workloads can be a challenge. Insight's End-of-Life (EOL) value accelerator helps you discover and assess your current application portfolio to define a robust migration strategy. Whether you are focused on migrating your Windows server and/or SQL server 2008 (end-of-support) or other critical workloads and data for optimisation, we can help you roadmap a way forward.

Our team of Azure experts have proven experience in both large and small migrations. We have helped deliver best practice migration options, platform governance and can assist in the continual optimisation of your Azure workloads post migration to support your changing needs.

Discover, assess and understand how to best modernise workloads to Azure.

EOL Value Accelerator

Our offering consist of a whiteboard-based workshop with both your business and technical stakeholders to help you identify the related applications, workloads and data current deployed within your organisation. We will tailor the discussion to deep dive into your immediate requirements and areas of interest to highlight quick wins for migration.

This interactive workshop runs for 4 hours to gain a clearer understanding of your needs and to provide you with next-steps guidance.

How we can help

- Discover and assess your potential migration workloads
- Obtain suitable migration options and roadmap
- Phased migration deployment
- Guidance for ongoing security and management of migrated workloads
- Get assistance on continual optimisation

Value assessment workshop
